AI HACKATHON SUBMISSION

Digital Pioneer

API Health SLA Monitor with AI Incident Intelligence

Live Demo URL
https://digital-pioneers-api-i-health-sla-monitoring-4n1n-dtoy5urp4.vercel.app/

Digital Pioneer logo

Brand identity and project positioning

- Proactive SLA monitoring across API endpoints
- AI-assisted incident analysis and recommended actions
- Export-ready reporting for operational teams

Team: Digital Pioneer

SLIDE 2

Business Problem

- Operations teams rely on manual log analysis during incidents.
- SLA breaches are often detected late.
- Root-cause diagnosis is fragmented across tools.
- Delayed response increases customer and business risk.

SLIDE 3

Stakeholders and Success Metrics

Primary Stakeholders

- SRE teams
- Operations teams
- Incident managers

Target Outcomes

- Lower MTTD
- Lower MTTR
- Reduced manual triage effort

SLIDE 4

Solution Overview

Log Ingestion	Metrics Engine	Risk Scoring	Incident Sync
AI Summary	Alerting	Reporting	Exports

- Supports `.txt` and `.log` input formats.

- Computes error rate and p95 latency per endpoint.
- Generates Markdown/PDF/JSON outputs for teams.

SLIDE 5

Architecture Design (Hybrid Intelligence)

Core Platform

- Next.js frontend and API routes
- Deterministic SLA/risk calculation
- Modular services and repositories

AI and Integrations

- LangChain + ChatGroq
- Brevo alert emails
- Vercel deployment with env config

Dashboard architecture screenshot

System architecture in practice: dashboard and monitor indicators

SLIDE 9

AI Innovation

- AI transforms computed metrics into incident-ready narratives.
- Recommendations are generated from structured operational context.
- Strict JSON schema is enforced for reliable downstream use.
- Hybrid approach balances explainability and reliability.

SLIDE 7

Live Demo Workflow

1. Login	2. Upload Logs	3. Risk Review	4. SLA Update
5. Run Monitor	6. AI Report	7. PDF Export	8. Business Action

SLA/SLO thresholds and impact controls

SLIDE 8

UI/UX and Product Readiness

- Professional dashboard theme and consistent card system.
- Reusable filters, pagination, loaders, and toasts.
- Action-focused workflows for logs, monitoring, and reports.
- Role-style login/logout and export-friendly reporting UX.

Dashboard overview with operational KPI visibility

Analytics charts (latency, risk channels, error trend) for executive insights

SLIDE 9

Business Impact and Feasibility

- Reduces manual triage and investigation overhead.
- Improves response speed for SLA-impacting incidents.
- Deployable now on Vercel for pilot usage.
- Scalable roadmap includes persistent database integration.

SLIDE 14

Rubric Alignment and Closing

- Business Problem Clarity: clear and measurable
- AI Innovation: practical, structured, explainable
- Technical Implementation: functional and deployable

- UI/UX Quality: intuitive enterprise-style interface
- Business Impact: faster and smarter incident operations

Closing: Digital Pioneer converts operational log noise into proactive SLA intelligence.
